Bug Spotted in WhatsApp – Chat Display Delay While Forwarding

Description

App: WhatsApp

Bug Type: UI Bug / Chat Display Glitch

Issue: When a user forwards a message to another person, the forwarded message temporarily appears in the sender's own chat window before showing in the intended recipient's chat. The display sequence glitches for a microsecond, creating confusion about where the message was sent.

Expected Result: The message should appear directly in the recipient's chat window, not momentarily flash in the sender's chat.

Impact: This may confuse users into thinking they accidentally sent the message to the wrong person or that a message has been duplicated.

Tested On: WhatsApp Mobile App (Android Version : 15)
